A pro's guide to prepping your digital images to print ...

The print resolution for a given image is a measure of the amount of detail it contains. When displaying images on the web, the typical resolution metric is pixels per inch (PPI). When preparing and optimizing for print, it's a good idea to use the dots per image (DPI) metric. This is the number of dots of ink on one inch of a printed image.

How to Prepare Images for Printing - Image Optimization ...

Having a correctly calibrated monitor is the most important factor when you want to prepare images for printing. Without a calibrated monitor you won't know what the image actually looks like. Calibrating the monitor means to balance and correct its colors, typically done by using a spectrometer and calibration software.
